## IPC EXTENDS SUPPORT TO EQUINIX-ENABLED FINANCIAL ECOSYSTEMS IN KEY METROPOLITAN REGIONS THROUGHOUT ASIA-PACIFIC

Electronic Connectivity Services portfolio now available to the financial community through Equinix's Hong Kong, Singapore and Tokyo International Business Exchange Data Centers

**Hong Kong, Singapore, Tokyo, Japan, June 7, 2010** – Equinix, Inc. (Nasdaq:EQIX), a provider of global data center services, and IPC, a leading provider of indispensable financial trading communications solutions, today announced that IPC has extended its core networking infrastructure to additional Equinix International Business Exchange™ (IBX®) data centers located throughout the Asia-Pacific region. IPC's expanded presence in Hong Kong, Singapore and Tokyo and will strengthen the company's capability to support the growing demand for its portfolio of Electronic Connectivity Services.

Last month, IPC and Equinix [announced](#) IPC's plan to extend its services to Equinix IBX data centers located in Asia-Pacific and Europe. IPC also leverages Equinix across North America in Chicago, New York and Toronto.

The Asia-Pacific market presents significant potential to the financial community as Asian exchange volumes continue to experience accelerating growth. With market de-regulation and the emergence of alternative trading venues and new market entrants, there is an increasing demand for inter-connectivity with multiple venues, participants and geographies in the region. The sheer scale of the region's geography also creates demand for Equinix's industry-leading interconnection services that enable the strategic financial ecosystems where firms are connected to key customers and partners to optimally transact business.

IPC's private and secure network interconnects more than 200 cities across six continents. The network has built-in resiliency for the highest levels of service availability and lowest latency, which is an ideal connectivity option for the members of the Equinix electronic trading community. The participants in Equinix-enabled financial ecosystems can reach out to more than 2,400 trading floors and almost 4,000 market participants and exchanges globally connected by the IPC network.

The network upgrade will strengthen IPC's offer of high-quality, reliable and scalable trading connectivity solutions for successful electronic trading. Equinix's global footprint of network-neutral IBX data centers also provides IPC a wide choice of connectivity options with networks, carriers and Internet service providers to optimize network performance.

“IPC’s decision to select Equinix’s premier data center services in Hong Kong, Singapore and Tokyo is another vote of confidence for Equinix across the Asia-Pacific region,” said David Wilkinson, senior director, Business Development of Equinix in Asia-Pacific. “Our established ecosystems of financial communities in our IBX data centers present an immediate market opportunity to IPC, hence facilitating its penetration into the regional markets.”

“A growing customer base here in Asia-Pacific means there is a need to enhance IPC’s infrastructure within the region,” said David Dodd, Managing Director, IPC Asia-Pacific. “Equinix’s premier data center services, global footprint and depth of operational experience meet our stringent requirements. Our network extension within the Equinix Asia-Pacific region can propel our service offerings to new heights, allowing us to better support the demand for scalable and high-performance connectivity in the region.”

### **About IPC**

### **Forward Looking Statements**

*This press release contains forward-looking statements that involve risks and uncertainties. Actual results may differ materially from expectations discussed in such forward-looking statements. Factors that might cause such differences include, but are not limited to, the challenges of acquiring, operating and constructing IBX centers and developing, deploying and delivering Equinix services; unanticipated costs or difficulties relating to the integration of companies we have acquired or will acquire into Equinix; a failure to receive significant revenue from customers in recently built out or acquired data centers; failure to complete any financing arrangements contemplated from time to time; competition from existing and new competitors; the ability to generate sufficient cash flow or otherwise obtain funds to repay new or outstanding indebtedness; the loss or decline in business from our key customers; and other risks described from time to time in Equinix’s filings with the Securities and Exchange Commission. In particular, see Equinix’s recent quarterly and annual reports filed with the Securities and Exchange Commission, copies of which are available upon request from Equinix. Equinix does not assume any obligation to update the forward-looking information contained in this press release.*
